

PERSONAL INFORMATION

Name: **Aung Cho Naung**
Nationality: Australian
Home base: Perth, Western Australia
Positions: SDE/DE/DSV//Workover Engineer/Supervisor
Qualifications: Bachelor of Engineering (Petroleum), Yangon Technological University,
Contact: ac.naung@outlook.com; +61 (0) 400 322 505

PROFESSIONAL EXPERIENCE

Current : Available on request.

2019 – Present: Consultant/Contract Drilling & Workover Engineer/Company man.
2007 – 2019: Senior- Drilling Engineer / Night Drilling Supervisor/Operations engineer as required.
2005 - 2007: Workover/ Well Intervention Engineer/ Supervisor.
1999 – 2005: Assistant Field Manager, Drilling Engineer / Workover, Well Service and Rig Operations Supervisor
1997 - 1999: Field Engineer, Production, Workover and Drilling operations

2019 – Present: Australia, Thailand

Company man/DSV for JU rig drilling operations with MOPU attached wellhead deck. Triplex Conductor sharing wellheads construction, 9 wells batch drilling management in conductor driving, offline cementing, and completion with conventional multi-zone gas lift, water injection/disposal, ESP and MTGL (mono trip gas lift) completion wells in Rossukon Field, GOT.

Well integrity and workover engineer for Well Integrity Diagnostic program and operations support.

P&A Design and review, Rig selection, Well Integrity and cost estimates.

2007 – 2019: Australia, Philippine, China, Bangladesh and Africa

Provides engineering supervision and support to various onshore and offshore add ips/add energy clients, in Australia and overseas.

Lead drilling engineer for prepared well design, drilling program and extended well test program for shallow water Jack-up rig.

Well Design and Cost. Drilling Program and implemented Drilled, complete and Well Test for 4 wells in Bangladesh Gas Field. Onsite operations support and supervise operations.

Drilling Engineer, planning and operations support for Hibiscus Carnarvon Sea Lion-1 drilling with mudline-suspension system (MLS) with West Telstro Jack-up rig.

Lead drilling engineer for Santos CSG wells P&A operations and DEEDI Carbon Capture Storage wells planning.

Drilling Engineer leading engineering teams in multiple projects and studies including: KNOC Vietnam – offshore platform development study, Rong Doi Moi extended reach well; Frontier Oil and Gas, Philippines – BOD for onshore re-entry and evaluation, Nassaping-2 well; Frigstad Energy, Philippines - offshore horizontal and extended well test, Calautit field; Blade Petroleum, Philippines – shallow water jack-up and EWT program.

Operations support Drilling Engineer assigned to Rimbunan Petro Gas, preparations and engineering for one well offshore exploration program utilizing Seadrill West Juno Jack-up rig. Relocated to Yangon to supervise operations. Drilling Optimization, including planning and executing casing drilling.

Drilling Engineer assigned to Nido Petroleum, preparations and engineering for a two wells offshore exploration drilling with Mud Line Suspension (MLS) system utilizing Premium Wilboss Jack-up rig. Relocated to Manila to supervise operations during the drilling phase. Led close-out of drilling program and final well reporting and performance analysis.

Lead drilling engineer for Tight Gas drilling, multi-stages CT frac and well testing program with Weatherford Rig-826 for Latent Petroleum.

Drilling Engineer for ARC Energy responsible for supervising drilling engineering personnel during project planning for Perth and Canning Basin exploration programs. During the drilling operational phase worked as Operations Engineer, reporting to the Drilling Superintendent, supervising day to day rig operations.

Support Drilling Engineer for IPSAA on the Daewoo International Deepwater exploration and appraisal program.

2005 - 2007: Thailand

Prepared detailed Workover program, liaised with well service team and reservoir engineers for selection of workover candidates' wells.

Performed detailed rig inspection, bid specification, review, and award analysis recommendations rig and services in compliance with Company and National Oil Company regulations. Recognize the importance of concisely defined services and equipment specifications in order to receive the best information back and best pricing from the service company providers.

Supervised onsite operations multiple-well workover activities for gas lift, Beam pump, PCP, injector, ESP and Dual completion workover operations. Preparation of Final Workover Reports and end of well summary cost and engineering information.

1999 – 2005: Myanmar

Production, Well services, Workover and Drilling activities in the high-pressure Mann field. Use of up to 21.0 ppg mud weights for pore pressure control. Preparation of workover programs to clean out sand from well bores, perform fishing operations, fracture stimulations. Warehouse inventory control monitoring. Production activities including production verification for individual wells and GOCS, daily and monthly invoicing, running well analyzer surveys, pressure transient surveys, BHP and BHT surveys, well service planning and operations supervision for PCPs, Beam Pump and Flowing wells.

1997 - 1999: Myanmar

Drilling Operations Engineer on Cooper 750 & 550 onshore mobile drilling rigs. Performed wide variety of workover and drilling service activities as part of the field management program by Baker Hughes Solution for the National Oil Company. Various drilling and workover projects including re-entry and deepening wells, running slotted liners, directional sidetracks, pump change out (Beam pump/PCP), well abandonment, etc.

TRAINING

IWCF Well Control Supervisor Level IV, Surface & Subsea.
BOSIET to refresh upon request.
Well Planning and Drilling Engineering
Life Cycle Reservoir Management, SPE ATW
Basic Reservoir Engineering
Drilling Optimization & Well Planning
Blowout Contingency planning, add energy
NORSOK D-010, Well Integrity in Drilling and Well Operations
Landmark™ Stress check, Compass, Well Plan;
Wellview™;
MS Word, Excel, Project, PowerPoint, Visio and ACAD,
Front End Web Developing
